Graphic Specifications

SCANDISPLAY

Getting your graphics print-ready:

1. Save artwork as a jpg or PDF, at actual size.

2. Do NOT include any crop marks on artwork.

3. Resolution should not be lower than **250dpi** for all artwork.

4. Please add:
    50mm bleed to all sides of artwork – for fabric prints
    10mm bleed to all sides of artwork – for vinyl prints

5. Specific colours should be provided as Pantones. However it is not guaranteed that Pantones can be matched 100% as the printing process uses CMYK ink.

6. All fonts should be provided or converted to curves.

7. Logos need to be supplied in Vector format (Illustrator, PDF or eps)

8. Material made up in MS Word, PowerPoint or CorelDRAW **cannot** be accepted as final artwork as it results in poor quality print.

9. Scan Display's facilities are Mac-based. Software used is Adobe CS Suite.

10. Please supply a hard copy proof or PDF file of the entire layout.
